

Pilot a/b subseries detection

This pilot infers handwritten subgroup ‘a/b’ labels from the Middle Chinese forms attached to each subgroup in the hand-written `main.tex`. It uses the subgroup head’s own MC forms as the primary signal.

1. Treat a subgroup as type ‘b’ when its extracted MC forms show an ‘i’-medial after the onset, for example *gie*, *phiu*, or *niəH*.
2. Treat a subgroup as type ‘a’ when the extracted forms lack that ‘i’-medial, for example *ka* or *puH*.
3. Leave bare zero-onset i- forms unresolved; this ambiguity does not arise in the selected pilot entries.

Pilot entries reviewed: 18-01, 01-67. Matched handwritten label in 8/8 inspected subgroups.

18-01 (可)

	Head	Hand	Pred	MC forms	Handwritten RHS LaTeX
Source lines 385–512.	何	a	a	ḥa, ḥaX	$g\{\}\text{textoverset{a}\{a\}y}$
	哥	a	a	ka	$k\{\}\text{textoverset{a}\{a\}y}$
	奇	b	b	gie, kie	$q\{\}\text{textoverset{b}\{a\}y}$

- 何: all extracted forms lack an i-medial after the onset.
- 哥: all extracted forms lack an i-medial after the onset.
- 奇: all extracted forms show an i-medial or a dedicated palatal onset.
